Heat Shrink End Cap for PE Cable

Heat shrink end caps are essential for situations that call for extra protection against abrasion, moisture, chemicals and corrosion.

Heat shrink end caps are most commonly used to insulate and seal off networking cables, especially useful for securing PE cables for outdoor use during the installation process. The high crimp ratio ensures a perfect seal.

- Crimping temperature +135°C
- For Ø4-8 mm PE network cables

Caractéristiques

Caractéristiques	Couleur du produit	Noir
	Diamètre après thermo-rétraction	3,8 mm
	Diamètre avant thermo-rétraction	8 mm
	Matériel	Polyoléfine
	Quantité	1 pièce(s)
	Température de thermo-rétraction	135 °C
	Type	Heat shrink end cap
Vendor information	Brand Name	Lanview
	Warranty	5 Année (s)
